Origins

Vacuum-CNC has been working throughout all these years in unifying in our brand all the subjection systems by vacuum for mechanising centres that exist in the market right now, adding certain improvements to work easily and help out in the saving of our clients.

"Vacuum-CNC" System

The main difference between our brand and others consists on separate the vacuum block in two pieces, base (inferior black part in contact with the milling center) and the cup (superior red part which holds the board or the piece to work out), this division offers quite huge advantages:

- Easy and fast to exchange the suction area.
- All the cups turn 360 degrees staying fixed when turning on the vacuum.
- It allows us to fix intermediate lifters between the base and the cup and therefore being able to work at many different heights, maintaining always the same base and cup.
- All of the vacuum cups have touch valve, so we can hold the vacuum block on the table even if they do not need to be used without losing vacuum.
- It allows, in case of a broken cup or need of a new suction area, to replace only the cup, what leads to a significant economic saving.
- The cups enclose the superior vacuum by a sealing rubber, very affordable and easy to replace. If It gets broken (until a 7mm depth) we can fix the vacuum cup at 100% of its capacity simply by changing the damaged gum part.
- For enterprises that have more than one mechanising centre with different vacuum cups, thanks to our system in two pieces it could be studied the point of combining the heights so that we can use the same cups in both milling centres (sometimes it may be necessary to change the height in which it works, otherwise, the combination is not possible).
- For the majority of models it exists the cup system with board lifter included. It exists for both formats, the vacuum system and the compact one.

"Compact" System

Is the simplest model, only in one piece, with no possibility of turning or change the suction surface. However, there are some models in which we have been forced to manufacture them with this system, to keep the height of the manufacturer or being able to offer a more affordable option for those cases that do not require such a versatile option as the vacuum system is. Thanks to being made of plastic, It won't affect the mill in case of an accident. As long as it's possible, It will include the spotted tablet to create different suction zones or to enlarge its useful life. All the vacuum cups have a touch valve to not lose any vacuum. For the compact system it also exists the possibility of adding the rise panel option.

Vacuum block for different models of SCM and Mordibelli.

The plastic used has certain flexibility and memory, for what It won't stretch as the original ones, which its fixation to the bar decreases with the use.

This model takes all the advantages of the Vacuum system.

BASES

Standard set (Base + Cup): 120 X 120 X 32.7 mm

(Different heights available)

MEASURES:

120 X 120 X 17.7

Alongside the CA cups of 15mm gives the height of the manufacturer (32.7mm)

- BS01N Standard base
- BS01R Base with hose connection: For machines with vacuum direct to the vacuum block.

System of Vacuum cup for grid tables, We can distinguish the model N and the model H depending on the depth

The inferior rubber is reversible so we can double the length of its useful life, which only seems to be shortened by the action of the vacuum on the rubber, which with the passing of time will lose its properties.

The lifting board system, initially thought for this model, is one of our main products as its allows you to load and unload the boards easily and with no need of external help without having damaged or moved neither the rubber or the block itself.

BASES

Standard set (Base + Cup): 120 X 120 X 50 / 75 mm

120 X 120 X 20mm

Depending on the client's needs It can be possible placing the CA cups of 20 mm 0r 30 mm.the bases are distinguished by the depth of the canal

^{*}Biesse is a registered and protected trademark. These products have been developed by Vacuum cnc specifically for machining centers CNC of Biesse.

VACUUM BLOCK KF12

FOR BIESSE

Vacuum cup model suitable with Biesse 's consoles to hitch with circular crown.

This crown is an independent article as a lot of clients prefer to reuse which they already have. The same happens with the 74 mm height models in the smaller options that use an aluminium plate at the bottom, which is also sold separately.

For this models of 74 mm height, those who want to reuse the original plate the smallest model that exists is 55 mm width. With the Vacuum aluminium plate we can make them as far as 35 mm width.

Standard Measures: 132 X 145 X 29 / 48 / 74 mm

(Different heights available)

^{*}Biesse is a registered and protected trademark. These products have been developed by Vacuum-CNC specifically for machining centers CNC of Biesse.

FOR BIESSE

In this model we screw the base in which normally the vacuum cup gets screwed. From there, with just a click we can modify the suction surface just exchanging the cups. This vacuum block takes advantage of all the improvements of the vacuum-cnc system. Although exist a compact model with different suction surfaces.

Standard set (Base + Cup): 160 X 150 X 24 mm

(Different heights available)

BS15N

BASES

MEASURES:

160 X 150 X 9 Alongside CL cups of 15mm gives the height of the manufacturer(24 mm)

CUPS

A: 150 B: 15 C: 7

KL15-15024T 160 x 150 x 24

Underside

^{*(}Possibility of making different heights and shapes depending on the customer needs).

^{*}Biesse is a registered and protected trademark. These products have been developed by Vacuum-CNC specifically for machining centers CNC of Biesse.

FOR SAOM, RIERGE, COSMEC...

Vacuum cup of one circuit with numerous options of suction areas.

It possesses a great grip to the bars thanks to its patented rubber by Vacuum cnc.

Triggers improved that guarantee a great duality.

This model takes advantage of all of the Vacuum cnc system.

This model also exists in compact system.

Standard set (Base + Cup): 120 X 120 X 50 mm

(Different heights available)

BASE

BS02N

MEASURES:

120 X 120 X 30

Alongside the CA cups of 20 mm gives the height of the manufacturer(50 mm).

There is an option of maintaining the original height with the lifting board included in the compact model.

^{*}Saom, Rierge y Cosmec is a registered and protected trademark. These products have been developed by Vacuum-CNC specifically for machining centers of Saom, Rierge and Cosmec.

VACUUM BLOCK KP04

FOR NIPUER

Vacuum cup specific for machines of milling doors. As it is made in plastic it doesn't affect the milling machine in case of crashing with the vacuum cup.

All of them includes a touch valve to not lose the vacuum even if it is not being used.

Standard Measures: 150 X 120 X 55 mm

150 X 70 X 55 mm 150 X 50 X 55 mm

(Different heights available)

FOR CASADEI BUSELLATO

System that improves the fastening of the original blocks with a huge difference, thanks to have a bigger suction surface and our system.

It needs to adapt (screw) the original piston that fixes the block to the bars to our base, once it's done there's no reason to unscrew them again.

BASES

Standard set (Base + Cup): 155 X 155 X 55 mm

(Different heights available)

BS07R

MEASURES:

155 X 155 X 25

Alongside the CD of 30mm gives the height of the manufacturer (55mm)

- **BS07R:** This model need the original pneumatic piston to the subjection to the bar.

^{*}Busellato is a registered and protected trademark. These products have been developed by Vacuum cnc specifically for machining centers of Casadei Busellato.

FOR EGURKO Y RIERGE

Vacuum cup model equivalent to the Egurko, Bermaq, Rierge, etc. We offer two options:

- The vacuum-cnc system, divided in two pieces and with the characteristics of the brand, speed, efficacy and saving. It's minimum height is 19mm.
- The compact system, in one piece but improving the benefits of grip for an optimum milling.

Standard set (Base + Cup): 158 X 120 X 30 mm

(Different heights available)

BASES

BS20N

MEASURES:

158 X 120 X 10

Alongside the CB cups of 20mm gives the height of (30mm). There can be different official measures.

BS20N18

Alongside the CB cups of 20mm gives the height of (38mm).

There can be different official measures.

^{*}Busellato is a registered and protected trademark. These products have been developed by Vacuum cnc specifically for machining centers of Casadei Busellato.

FOR FLAT TABLES

Vacuum cup for flat table, very versatile thanks to the infinite possibilities of suction surfaces that give our system of changing cups.

It has a great grip to the bars thanks to its patented rubber by vacuum cnc.

This model takes advantage of all the improvements of the Vacuum cnc system.

The plastic material of which it is made protects the tools of braking in case of an accident. Valid for milling all kinds of materials (derivatives of plastic and wood, crystal etc.)

Standard set (Base + Cup): 132 X 132 X 50 mm

(Different heights available)

BASE

BS27N-30

MEASURES:

MECHANICAL CLAMPERS

Vertical mechanical clampers activated by vacuum.

They turn on when activating the vacuum in the machine and they position as any other kind of vacuum cup, without hose connection or screws unless is absolutely necessary. Clamping forces of up to 700 n.

All of our vertical presses include two elevator caps of 25 and 50 mm for being able of lifting the height, until a recommended maximum of 100 mm, allowing us to realize all kind of tasks.

PR16N
